17th of October 2022

*This document is the audit of Coinpayer smart contract performed by SMCAuditors.*

## 1. Executive Summary

Coinpayer is a crypto payment platform for web pages and stores (<https://coinpayer.co/>). This report was written to provide a security audit for Coinpayer Token Binance Smart Chain contract. SMCAuditors conducted the audit, focusing on whether token smart contract is designed and implemented without any security vulnerabilities. The contract is listed below with its link.

- <https://bscscan.com/token/0x62ac75284D270835B944D451bBad3014995e0725>

We have run an extensive static analysis of the codebase as well as standard security assessment utilizing industry-approved tools. There are no critical/high-level issues with the currently deployed token contract. Our low-level findings are available in the next section.

## 2. Audit Findings

### Low Level Findings

- ❖ Creator wallet contains all circulating token supply. Consider locking the rest of the token supply after presale and liquidity pool creation.

## 3. Conclusion

In this audit, we thoroughly analyzed the Coinpayer smart contract and found no critical/high-level issues.

✓	No critical issues found
✓	Contract owner cannot mint tokens
✓	Contract can not be manipulated by owner functions
✓	Contract ownership renounced (contract is not ownable)
✗	Creator has less than 10% of the token supply

## 4. Disclaimer

This report is not advice on investment, nor does it guarantee the adequacy of a business model and/or a bug-free code. This report should be used only to discuss known technical problems. It will be necessary to resolve addressed issues and conduct thorough tests to ensure the safety of the smart contract.
