9th of October 2022

This document is the audit of MBS smart contract performed by SMCAuditors.

1. Executive Summary

MBS is an Ethereum based token named after HRH Crown Prince Muhammad Bin Salman of Saudi Arabia. This report was written to provide a security audit for MBS (https://mbscrypto.com/) Ethereum smart contract. SMCAuditors conducted the audit focusing on whether token smart contract is designed and implemented without any security vulnerabilities. The contract is listed below with its link.

- https://etherscan.io/address/0x275e1D90fa11F109F936E10917862aE3Ec415d2 E

We have run an extensive static analysis of the codebase as well as standard security assessment utilizing industry-approved tools. There are no critical/high-level issues with the currently deployed token contract. Our low-level findings are available in the next section.

2. Audit Findings

Low Level Findings

❖ 25% of the total supply has a potential to be circulated after the presale. Consider locking tokens to be distributed monthly.

3. Conclusion `

In this audit, we thoroughly analyzed the MBS smart contract and found no critical/high-level issues.

✅	No critical issues found
✅	Contract owner cannot mint
✅	Contract cannot be manipulated by owner functions
✅	Contract cannot be locked
✅	Ownership/Operator is renounced

4. Disclaimer

This report is not advice on investment, nor does it guarantee the adequacy of a business model and/or a bug-free code. This report should be used only to discuss known technical problems. It will be necessary to resolve addressed issues and conduct thorough tests to ensure the safety of the smart contract.
